

## Sonorex® rock wool trapezoid blocks

➤ **To seal gaps in the roof sheet**

➤ **Sonorex rock wool trapezoid blocks**

The Sonorex® rock wool trapezoid block is an uncoated rock wool insulation block (firewall) and seals the space between the underside of the steel roof sheet and the underlying structure. The Sonorex® rock wool trapezoid block is supplied as standard in a large corrugated version for connection to the underside of the steel sheet. The Sonorex® rock wool trapezoid block fulfils the requirements of the **Euro Fire Class A1** according to NEN-EN 13501-1.  
**Density approx. 40 kg/m<sup>3</sup>.**

Because we produce the Sonorex® rock wool trapezoid blocks in-house, we can also customise them for you. We can supply different dimensions and/or profiles and treatments (for example sealed-in), as well as delivery time and prices, on request.

➤ **PE filler blocks**

Trapezoid blocks are also available in a PE version in white or anthracite colours. These filler blocks have an aesthetic value and do not meet the requirements of the Euro Fire Class A1. Delivery periods and prices can be notified on request.

➤ **Sonorex® Flute fillers**

The Sonorex® Flute fillers can be supplied in Glass wool and rock wool. They are used to fill small and/or large perfo corrugated steel sheets and improve the sound absorption of perforated steel roofs. Sonorex® Flute fillers are also available in an **acoustically open black PE foil**. They can be processed quickly and economically due to their length of 1,200mm.
